About

As a technology enthusiast I am continuously researching the latest innovations and the skill-set required to make it all come together. I love web design, problem solving and data visualization. I believe there is a career niche for me that involves the combination of web programming, and data science. I am currently a grad student, who is seeking to transition from web development into a career within the Big Data arena. I have been learning how both Business Intelligence solutions and technology like Hadoop are helping to solve the problems that come along with Big Data.

Experience Snapshot

2014-Current   NASA Marshall Space Flight Center
Junior Software Engineer - DTS MITS Contract
